DDAR Exercise 1.1

a) *“Examine a number of recent issues of a scientific or statistical journal in which you have some interest. Find one or more examples of a graph or table that is a particularly bad use of display material to summarize and communicate research findings. Write a few sentences indicating how or why the display fails and how it could be improved.”*

Retrieved from: <https://doi.org/10.1155/2022/3802603>

This graph published in *Advances in Materials Science and Engineering* in 2022 attempts to depict the selectivity of a biosensor with several enzymes interfering. From the text, it is not clear what this graph attempts to show and why “pink” deviates from the rest of the enzymes. Additionally, “pink” and “blank” are not enzymes. An x -axis label would help to clear the confusion regarding “pink” and “blank.” Furthermore, the “error bars” are actually the letter “T” superimposed on the graph. Authors should have used a statistical measure of uncertainty (e.g., standard error) to construct proper error bars. Last, the graph would benefit from a title and a better explanation in the figure caption (as is, the caption simply reads “Selectivity of the analytical method.”).

DDAR Exercise 1.2

“As in the previous exercise, examine the recent literature in recent issues of some journal of interest to you. Find one or more examples of a graph or table that you feel does a good job of summarizing and communicating research findings.”
